

SmartCast® Touchscreen

LIGHTING CONTROL THAT QUIETLY IMPRESSES

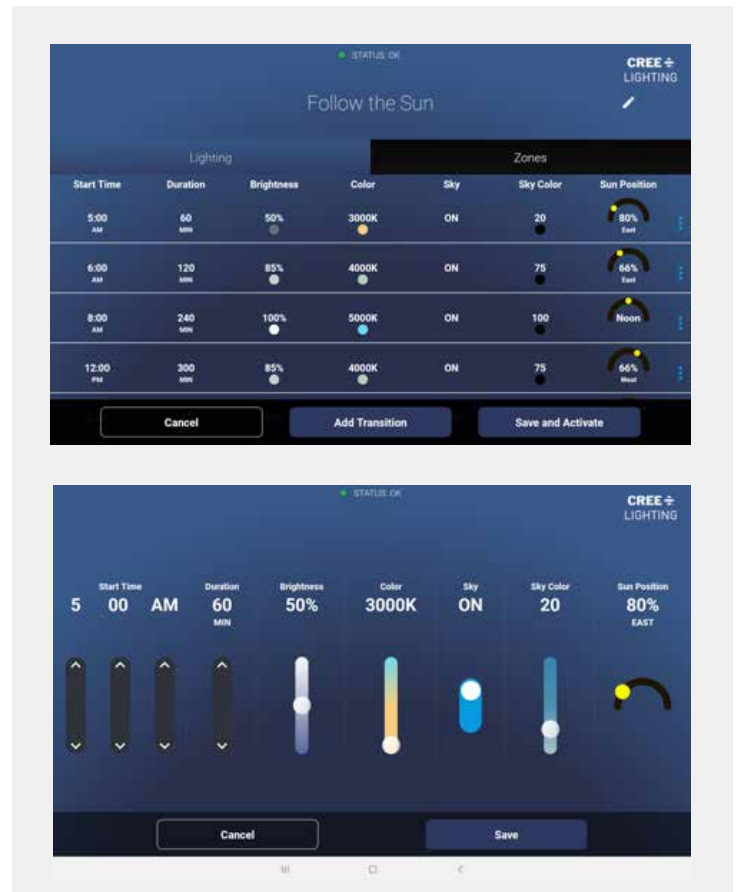

Commercial lighting continues to evolve from optimizing for energy savings to a more people-centric focus optimizing for productivity, comfort and personal preference. Cree Lighting's Smartcast® Touchscreen introduces a rich set of new advanced lighting control features to the Smartcast® family of devices. The Smartcast® Touchscreen provides a 10-inch wall-mounted, touch-based interface that is built to offer simplicity and flexibility to users creating lighting of their choice using features such as Scene Control and Dynamic Lighting.

DYNAMIC IN EVERY SENSE

The Dynamic Lighting feature enables you to define how lighting in your space changes during the course of a day. You can set this feature to automatically run for your space by defining a profile. Define it once and the Smartcast® Touchscreen system will run your profile on the lighting zones of your choice automatically in the background while also providing you full control to override when you need to. Now you have a lighting solution that will follow the day from dawn to dusk or from dusk to dawn – you decide!

VERSATILE SYSTEM WITH A SINGLE INTUITIVE INTERFACE

The SmartCast® Touchscreen provides on-premises, hassle-free advanced lighting control of SmartCast® lighting for any space using a 10-inch wall-mounted color touchscreen that seamlessly and aesthetically blends with surroundings. A simple touch controls light levels, CCT and scene presets without obtrusive dimmers and switches, providing autonomous operation with dynamic lighting and full manual control when you need it. Users also have the option to customize the display with logos.

Dynamic Lighting profile setup

SCENE PRESETS TO TRANSFORM YOUR SPACE

With the SmartCast® Touchscreen, you can transform your space by selecting a lighting preset scene of your choice with a single touch. With the intuitive, clean graphic interface, users can easily create and save their own presets for simple control over light levels and color profiles. With fully configurable scene control, users can set color temperature, light levels and other settings for each lighting zone by mood, task or time of day. Up to 16 configurable scene presets are available to easily choose between lighting scenes. Each scene can control unique settings for up to 12 lighting zones.

EASY, IT-FREE INSTALLATION AND CONFIGURATION

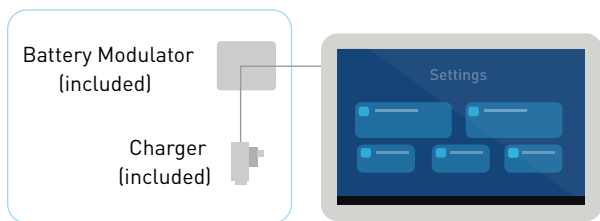

Installation and set-up are simple with the SmartCast® Touchscreen, which communicates, using Wi-Fi, with your SmartCast® Wireless network via the secure and open SmartCast® API and SmartCast® Wireless Gateway. Standalone operation means no IT hassles or cybersecurity concerns. And the configuration capabilities allow users to quickly and easily save new lighting recipes as scene presets and dynamic lighting profiles.
